

**UNIVERSITÉ
DE GENÈVE**

FACULTÉ DE MÉDECINE

Opening PhD position in Brain Biomarkers Research

We are immediately seeking a highly motivated PhD student to complement our research team at Biomedical Proteomics Research Group of the University of Geneva (Faculty of Medicine, <http://www.expasy.ch/bprg/>) in Switzerland. Our lab focuses on the discovery and validation of brain biomarkers. Our studies provide a molecular insight into the field of diagnosis, prognosis and treatment of cerebrovascular diseases.

A position is available now for a new project dedicated to the exploration of cerebral microdialysis in human subarachnoid hemorrhage. It will combine discovery and validation phases of new protein biomarkers for vasospasm prediction. Our multi-disciplinary approach will allow the student to be in contact to several fields from proteomics and biochemistry to medical environment.

Potential candidates must have a master degree in Life Sciences, Biochemistry or related disciplines. A background in proteomics and/or biochemistry is required. Knowledge in bioinformatics or biostatistics is a plus. Good French and/or English levels are mandatory.

The position is funded by the "*Fondation Pierre Mercier pour la Science*" for 3 years.

Interested candidates should send their application including complete CV, short motivation letter and the names and addresses to 1-2 references directly by email to:

Dr Natacha Turck

or

Dr Jean-Charles Sanchez
