

Geneva University, Faculty of Medicine

Senior Scientist position

Protein Chemistry & Mass Spectrometry

A senior scientist position is available at the Proteomics Core Facility of the Faculty of Medicine, Geneva University, Switzerland (starting July 1st 2011).

This position requires an individual with strong teamwork and technical skills for protein analysis by mass spectrometry. It includes assisting in the day-to-day running of the core facility, which includes several MALDI and ESI-MSⁿ instruments. Besides strong sample preparation, computer, and protein mass spectrometry skills, this position requires an ability to work in a highly collaborative environment for the benefit of biologists. The position also involves advising and teaching on technological aspects of proteomics and the use of mass spectrometers.

Applicants must have a Ph.D. degree in chemistry, biochemistry, or related disciplines with at least 3 year post-doctoral experience with mass spectrometry-based proteomics. The ideal candidate should have an extensive knowledge of peptide/protein **MS** and **MS/MS** analysis, and experience in **relative and absolute quantification** of proteins. The ability to communicate clearly and share technical and protein chemistry knowledge with other researchers is crucial. Proficiency in English and French is mandatory.

If you feel you are a dynamic and independent scientist who has the potential to contribute to this exciting and challenging project, please submit your letter of interest, C.V. and the names and addresses of three referees to jean-charles.sanchez@unige.ch.

Review of the applications will start the 1st of June 2011 and until the post is filled. All enquiries will be treated in strictest confidence.
